

Square Up Event Planner

By the Purple Nut Team

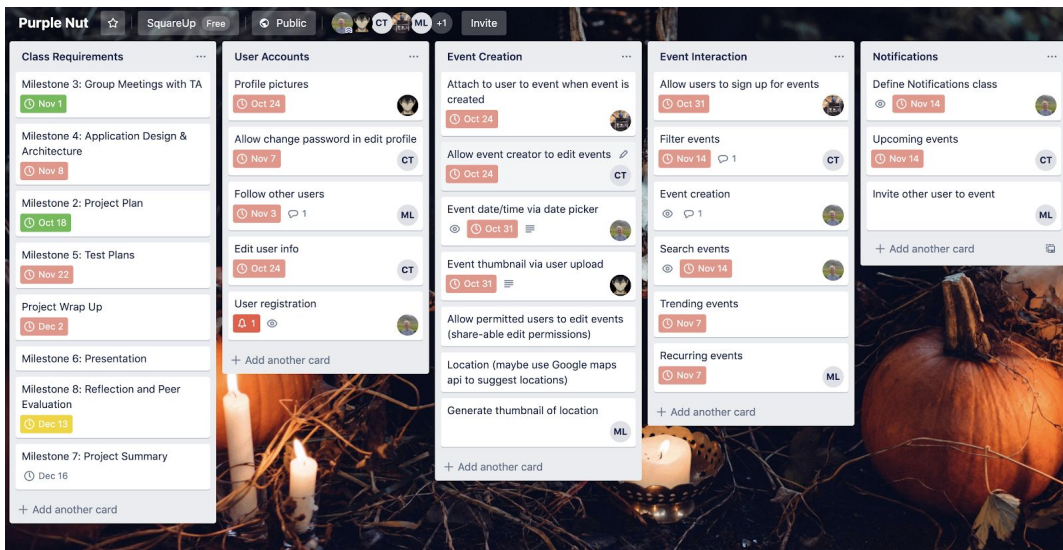

Royce Schultz, Bradley Ma, Chace Trevino, Manuel Lindo, Ishan Kumar, Reece Legan

Youtube Video - [Demo](#)

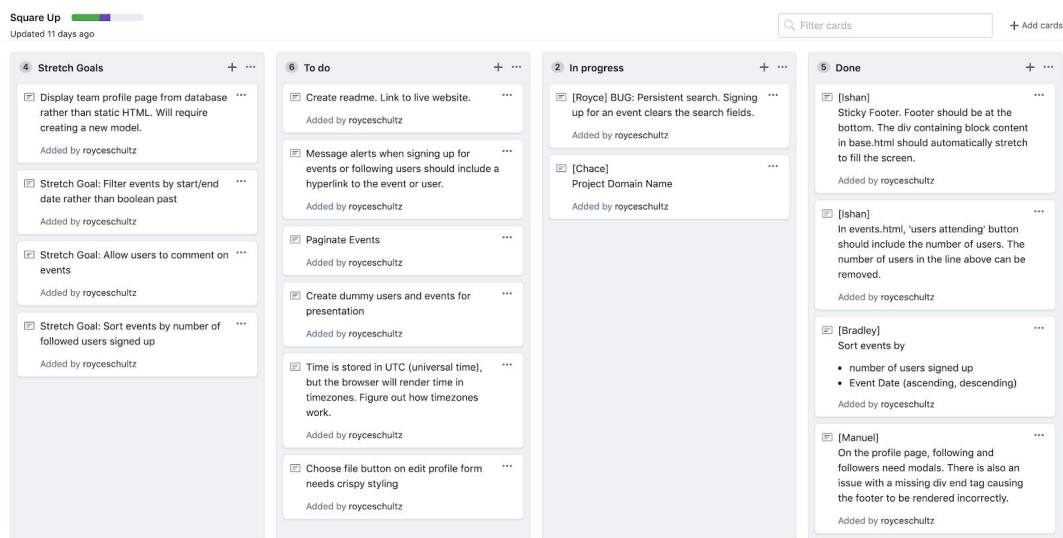

Deployment - AWS, [We're on the line!](#)

An EC2 instance hosted on Amazon Web Services. The website will always be running unless the host (Chace) decides to terminate the instance.

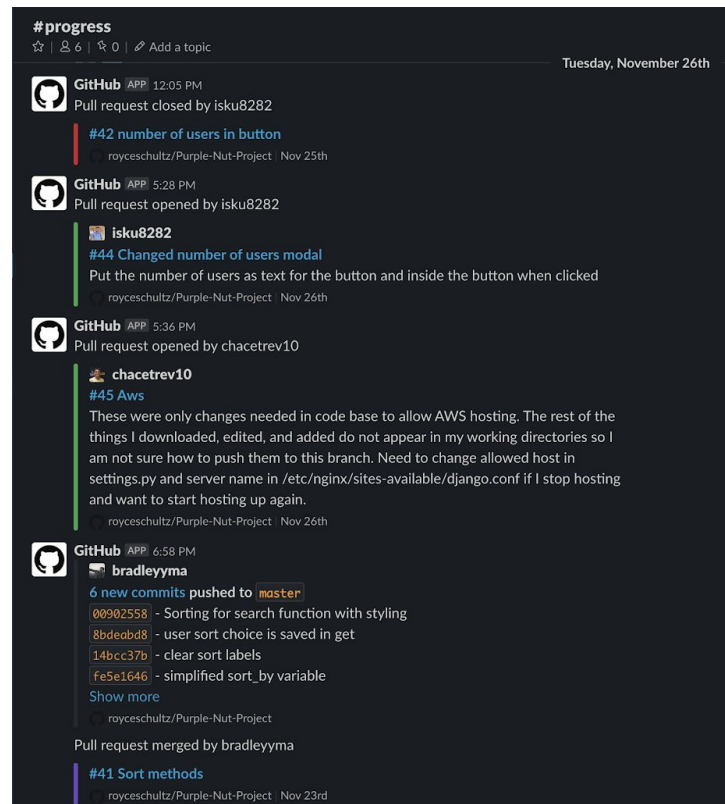

Project Tracker - [Trello Board](#)

[Github Project Board](#)

Group Communication - [Slack](#)

We use Slack bots to help keep us organized and updated on what was going on with the project. The bots we had included meeting reminders, pull requests, and merges. The meeting reminders popped up 40 minutes before a meeting asking where we would meet. This allowed everyone to get a notification at the same time every week, and give us enough time for people to respond and get prepared. The pull requests and merges bot told everyone that a pull request or merge has happened in the github repo. Having a bot tell us when something happened in the repo allowed everyone the knowledge of what is happening with the project. Since we needed two people to approve the pull requests, having the bot gave us the ability to be on top of the project. We found the slack bots very helpful and useful.

Version Control System - [Github Repo](#)

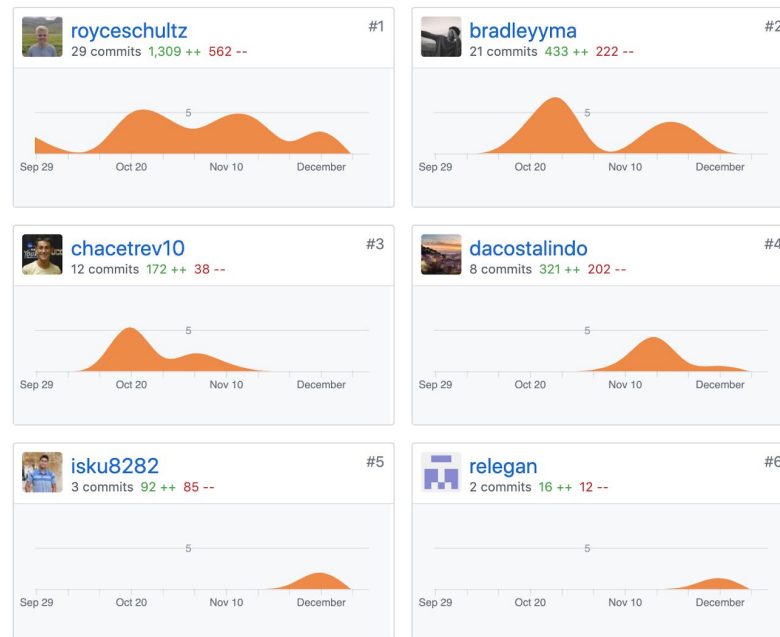

Below are the commits from each member that were incorporated into the final product. In order for a commit to be merged into the master repo, the user needed to create a pull request to the master branch. Before anything was merged into the master branch, the pull request from the user needed to be reviewed by two other team members. The review process included pulling the test features and running the version to make sure there were not any bugs that broke the application as well as reading over the physical code. This allowed the members to become familiar with what others were doing and make sure the style of code was consistent.

Commits:

Sep 29, 2019 – Dec 12, 2019

Contributions: Commits ▾

Contributions to master, excluding merge commits

Code Reviews:

**Review required**

At least 2 approving reviews are required by reviewers with write access. [Learn more.](#)

**Merging is blocked**

Merging can be performed automatically with 2 approving reviews.
